

## (C)One Logistics

is built to give the right solution to the right customer

Logistics by its nature should be very flexible. To meet client demands, logistics suppliers combine different activities into a solid integrated service. It is the only way to survive in a competitive environment. And if they want not only to survive but to win, the service has to be supported by seamless, transparent information flow both inside the company and with its clients and partners. To achieve this goal, suppliers need an information system that can be put together as easily as building blocks, yet be as solid as a brick wall.

The solution is (C)One Logistics, which is a set of combinable modules covering all logistics activities

We offer you a **one enter** solution for your freight, transportation, warehousing, consolidation, customs clearance or other logistics services, standalone or combined, simple or complex. (C)One Logistics is developed for your business to **maximize efficiency**, transparency and **controllability** in all your activities.

### CLIENTS SAY

*"With implementation of the system, cargo selection speed and accuracy were immeasurably increased. It attracts more clients who need complex packaging to us than we could expect."*

Tiit Arus

CF&S Estonia AS  
Member of the Board

*"The system helps us to make our distributed offices much, much closer, it simplifies interfacing inside the corporation and eliminates double work. It helps us to keep up a corporate identity and make consolidated reporting, even though it is localized for all country's rules and laws."*
