(C)One Terminal

is built to grow and change with your business

The great challenge for successful terminals nowadays is to grow and develop in a very competitive environment. Masses of questions and tasks need to be solved, and one of these is the choice of Terminal Operation System – TOS. The right choice should allow you to optimize processes, machine and human usages and to provide your clients with all needed information on time. And it should be priced competitively.

The solution is (C)One Terminal which solves all questions once and for all

We offer you a **one enter** solution for dry terminals - (C)One Terminal. Forget about making compromises! Our TOS will act exactly as you want, meaning you won't have to replace it when your business changes, even dramatically. (C)One Terminal is developed for your terminal – for your current terminal and for the terminal of your future.

(C)One Terminal	even though
can be integrated with any existing technical or automation solutions	we can provide it as complete solution from single vendor
is a flexible system, meeting your unique demands, and can be adapted later without terminal process interruptions	its information storage is highly scalable and reliable and can quickly process large amounts of data
is a platform- and device-independent system with a web-based interface	it is ready for massive user input and provides innovative visualizations of all processes
has proven and heavy tested high-level security	gives bidirectional on-line access to your clients
increases efficiency in terminal operations and allows you to provide high-value services for your customers	it can include tariff and billing, smart reporting system with report builder and drill downs
can contain additional automations with OCR, RFIDs, Truck Gates, Damage Control, Ref Control etc.	it can also work without these to avoid big investments in hardware to fit small terminal budgets

(C)One Terminal

is the most advanced IT solution for your terminal operations
